

TRUEshot AI Drilling Intelligence Suite

Executive Summary

Prepared by: Tony Lawal
B.S. Geology (University of Ibadan)
M.S. GeoEnvironmental Studies (University of Massachusetts Lowell)
Postgraduate Certificate in Artificial Intelligence & Machine Learning (The University of Texas at Austin)
25+ Years Oil & Gas Industry Experience

Overview

Prototype AI Drilling Intelligence Suite demonstrating predictive maintenance, automated reporting, drilling optimization, and anti-collision monitoring concepts for MWD and Directional Drilling operations.

Developed Applications

- MWD Predictive Maintenance
- Automated MWD Reporting
- Directional Drilling Analytics Dashboard
- Automated DD Reporting
- ROP Optimization
- Anti-Collision Monitoring

Potential Benefits

- Improved reliability through predictive monitoring
- Reduced engineering reporting workload
- Improved drilling performance through optimization
- Enhanced operational safety

Proposed Next Step

Provide a brief demonstration and discuss potential adaptation of these concepts using TRUEshot operational data and workflows.
